

CONTENTS

1	Introduction	1
1.1	Motivation	2
1.2	Structure	6
2	Related Work	7
2.1	Semantic Segmentation	7
2.2	Domain Adaptation	11
3	Foundations	17
3.1	Computer Vision	17
3.1.1	Aerial Images	17
3.1.2	Segmentation	18
3.1.3	Semantic Segmentation Evaluation Metrics	20
3.1.4	Fourier Transform	23
3.2	Deep Learning	24
3.2.1	Artificial Neural Networks	24
3.2.2	Whitening	26
3.2.3	Activation Functions	27
3.2.4	Normalization	28
3.2.5	Loss Functions	28
3.2.6	Backpropagation	29
3.2.7	Optimizers	31
3.2.8	Generalization	32
3.2.9	Convolutional Neural Networks	34
3.2.10	Ensemble Methods	36
3.3	Domain Adaptation	36
3.3.1	Transfer Learning	36
3.3.2	Domain-Adversarial Neural Networks	38
3.3.3	Cycle-GAN	38
3.3.4	Self-Training	39
3.4	Spatial Partitioning	40
3.4.1	Binary Space Partitioning	40
3.4.2	Signed Distance Functions	40
3.4.3	Quadtrees	43
3.4.4	k -d Trees	43
4	BSP-based Semantic Segmentation	44
4.1	Model Architecture	45
4.2	Differentiable BSP Tree Rendering	49
4.3	Shape-optimizing Loss Function	51
4.4	Evaluation	55

4.4.1	BSP Trees as Ground Truth	55
4.4.2	Ablation	56
4.4.3	Encoder/Backbone	57
4.4.4	Comparison to Other Segmentation Models	58
4.4.5	Region Map Analysis	59
5	Domain Adaptation via Style Transfer in the Frequency Domain	62
5.1	Appearance Adaptation	62
5.1.1	Patch Extraction	64
5.1.2	Learn Mean and Covariance Matrices	65
5.1.3	Compute Whitening Matrices	67
5.1.4	Transfer Appearance	68
5.1.5	Combine Transferred Patches	69
5.1.6	Adaptation Direction	70
5.2	Feature Adaptation	71
5.3	Self-Training	73
5.4	Evaluation	74
5.4.1	Appearance Adaptation	74
5.4.2	Full Domain Adaptation	75
6	Evaluation	78
6.1	Datasets	78
6.2	Testing Procedure	81
6.3	Semantic Segmentation	84
6.4	Domain Adaptation	87
6.4.1	Comparison to State of the Art	97
7	Conclusion	100
7.1	Summary	100
7.2	Future Work	102
A	Appendix	103
A.1	Numerically Stable Cross-Entropy Loss	103
A.1.1	Numerically Stable Softmax	103
A.1.2	Cross-Entropy Loss	104
A.2	Generalization to Other Spatial Partitioning Tree Structures	105
	Bibliography	107
