

# Content

## 7 Vehicle Dynamics

---

**Dynamic Chassis Control Pro – Advancing Semi-Active Suspension Control with Dual-Valve Damper Technology** 1

S. Kukla, C. Weber, F. de Beer, Volkswagen AG, Wolfsburg

**Vehicle Dynamics Modelling for Virtual Estimation of Dynamic Wheel Loads** 13

V. Yordanov, L. B. Pouansi, R. Asgarzade, L. Eckstein,  
Institute for Automotive Engineering – RWTH Aachen University

## 7 Tyre Wear Emissions

---

**Influence of inner city driving maneuvers on the distribution of tire abrasion particles** 29

T. Borodina, T. Bachmann, Technische Universität Ilmenau, Ilmenau

**A method for predicting tire wear rates based on measurements and simulations** 43

P. Bühler, M. Gießler, Karlsruher Institut für Technologie (KIT), Karlsruhe;  
H. Christiansen, G. Franosch, Fraunhofer-Institut für Techno- und  
Wirtschaftsmathematik (ITWM), Kaiserslautern

**Application of a Skid Trailer to the Measurement of Tyre Road Wear Particles** 59

P. Trechera, Applus IDIADA, Applus+ IDIADA Group, Santa Oliva, Tarragona, Spain

## 7 Tyre Wear & Property Prediction

---

**A Fully Physical Thermo-Mechanical Framework for Predicting Temperature-Dependent Tire Behavior**

F. Calabrese, A. Gallrein, T. Ruhwedel, Fraunhofer Institut fuer Techno- und  
Wirtschaftsmathematik (ITWM);

M. Bäcker, C. Burkhart, VTT – Virtual Tire Technologies GmbH, Germany, 73

## 7 Innovative Chassis

---

**Innovations & Simulation in Solar Racing!** 99

L. Morad, Sonnenwagen Aachen e.V., Aachen

## 7 Keynote

---

- Tire NVH: Critical Review of Testing Methods through the Lens of Tire-Road Interaction – Strategies, Surfaces, Pros, Cons, and Pathways Forward** 107  
J. Pankau, NVH Consulting LLC, Michigan, USA

## 7 Advanced Modeling, Simulation & Sustainability

---

- Designing Polyvalent and Variant-Robust Chassis Through a Comprehensive and Integrated Simulation Ecosystem** 125  
F. Sptler, Michelin Simulation Services, Clermont Ferrand, France
- Analysis of the degradation behaviour of tire wear particles in aquatic systems under various material and environmental conditions** 135  
R.-M. Baehre, Leibniz University Hannover, IKK, Garbsen

## 7 Tyre Road Interaction

---

- Virtual Co-Development - Benefits for an advanced Testing Vehicle** 149  
S. Pyrek, Pirelli Deutschland GmbH, Breuberg

## 7 Innovative Development Methods

---

- Development of a steering torque model for dynamic driving simulators based on HiL measurement data** 157  
H. Lausch, J. Iatropoulos, R. Henze, TU Braunschweig, Braunschweig
- Simulation of Tire Interaction with Deformable Terrain Using the Material Point Method** 171  
F. Hamad, K. Wiese, P. Lenz, S. Sharma, C. Boston, C. Bederna, Continental Reifen Deutschland GmbH, Hanover
