

Content

Automotive AI – Strategy

- The Great Leap Forward: Inspirations from China's „Scenario-Defined“ Path to Rapid AI Implementation in Mobility** 1
A. Wang, Neusoft Corporation, Neusoft Europe, Neusoft America

Software for the SDV-Platforms

- Architecting Scalable and AI-Ready Vehicle Platforms
A system-level framework for SDV** 13
M. Klauda, Z. Slavik, T. Huck, Robert Bosch GmbH, Leonberg
- From ECUs to Zones: Enabling SDVs with Zonal Architectures and
Middleware Platforms** 23
S. Poledna, TrustMotion, Vienna

Automotive AI – AI Developed Vehicle

- Integrating AI-based components into established software development
toolchains for resource-constrained, safety-critical ECUs** 27
S. Grannemann, L. Wallbaum, dSPACE SE & Co. KG, Paderborn;
O. De Candido, dSPACE SE & Co. KG, Munich
- AI-Based End-to-End Automotive Design and Software Development
for SDVs** 39
N. Petrovic, A. C. Knoll, Technical University of Munich, Munich
- Ensuring Trustworthy AI-Driven Mobility: Monitoring Approaches from
the Safe AI Engineering Consortium** 55
X. Wang, A. Bieberstein, Bertrandt Ing.-Büro GmbH, Gaimersheim

Software for the SDV – Data Driven Development

- Accelerating automotive innovation via AI-enhanced data-driven
development** 69
Y. Baudouin, AUMOVIO SE, Munich; G. Raedler, AUMOVIO SE, Lindau;
C. Geiger, AUMOVIO SE, Memmingen; S. Selvaraj, AUMOVIO SE, Bangalore
- Full Circle Diagnostics & Repair
A Paradigm Shift for Diagnostics in Software-Defined Vehicles** 85
S. Sauerzapf, C. Seitz, ETAS GmbH, Stuttgart

7 AI-Driven ADAS

- Accelerating Vision-Language-Action Models for Autonomous Vehicles** 97
F. Kraemer, IBM Systems Architect, Frankfurt/Main
- Scaling AI-ADAS/AD L4 to Break the „Re-Validation” Bottleneck** 101
K. Alomari, S. Hussein, MHP Management- und IT-Beratung GmbH, Ludwigsburg

7 Organizational Transformation

- RISE Framework: A Systematic Approach to Analyse and Streamline Engineering Processes Using Open Standards** 119
O. Jarrar, A. Holtz, Volkswagen AG, Wolfsburg;
A. Lüder, Otto von Guericke University Magdeburg
- Software-Defined Products Require Software-Defined Organizations** 131
T. Sturm, S. Märkl, T. Markfelder, 3DSE Management Consultants GmbH, Munich

7 Architecture – Powernet

- The Three Pillars for Tomorrow’s Powernet** 149
M. Sesselmann, R. Demmelhuber, M. Orner, Mercedes-Benz AG, Sindelfingen
- Future Low-Power Drives for New Vehicle Architectures: From 48V Solutions to Ethernet-Based, Highly Integrated Drives** 165
A. Schaumann, R. Berger, Robert Bosch GmbH, Bühl
- Towards Energy-Efficient High-Performance Computers for Software-Defined Vehicles** 177
T. Kadeed, Aumovio Engineering Solutions GmbH, Frankfurt am Main

7 Customer Experience

- Towards Human-Physical-AI Architecture: Semantic XR Interfaces for Bidirectional Interaction Between Humans, Robots, and Vehicles** 187
A. R. S. Gerlicher, Z. Walker, Stuttgart Media University, Institute for Mobility and Digital Innovation, Stuttgart; C. Hackenbeck, Graduate School of Excellence Advanced Manufacturing, Stuttgart; Mercedes-Benz AG, Stuttgart

7 Electronics Technologies & Semiconductors

- Smart and Software-less Endpoints for Software-Defined Vehicle** 203
T. Otter, D. Mysliwitz, Infineon Technologies AG, Neubiberg
- Finite Element-Based Virtual Validation of Inverter Structures for Vibrational Loads**
- Virtual Validation of Solder Joints in Printed Circuit Board Assemblies** 211
W. Hinterberger, C. Neubacher, Engineering Center Steyr GmbH & CO KG, St. Valentin, Austria
- From Optimization to Transformation – The ACT Framework for Semiconductor Supply Chain Resilience in Automotive** 223
M. Krane, H. Gallwas, btv technologies GmbH, Unna

7 Quantum – Future Computing

- Quantum Computing for Automotive Engineering – Quo Vadis? Practical Impact, Roadmaps and a Call to Action Across Three Maturity Horizons** 235
K. Shiiyanov, P. Fintl, Capgemini Engineering, Munich
- Post-Quantum Cryptography in Automotive: Why Migration Must Start Now** 253
L. Guerrasio, M. Mast, msg for automotive, Munich
- Quantum Computing and Post-Quantum Cryptography in the Automotive Industry – Are you prepared?** 261
P. Korsakas, J. van Lier, A. Artamonow, MHP Management- und IT-Beratung GmbH, Ludwigsburg

7 Automotive Trend Session (ATS): Automotive AI

- Agentic AI Assistance for Software-in-the-Loop Validation** 275
K. Reim, Y. Badawi, H. Bhatt, dSPACE SE & Co. KG, Paderborn

7 Software for the SDV – Middleware & Tools

- Industrializing S-CORE: From Open Foundation to Production-Grade SDV Middleware with AI-Native Engineering**
- What really happened!** 289
N. Hartmann, Qorix GmbH, Stuttgart

Rust for Automotive ECUs – A Practical Landscape of Frameworks, Tools, and Methods for Safety-Critical Embedded Development	291
F. Baumann, STMicroelectronics Application GmbH, Aschheim;	
R. Blazek, STMicroelectronics Design and Application s.r.o., Prague, Czech Republic	

Continuous Qualification of the Software Development Environment for Software-Defined Vehicles	299
S. van der Zwaan, Solid Sands B.V., Amsterdam, The Netherlands	

7 High Performance Computing

New E/E Vehicle Architecture – Technology-driven Perspective of the Automotive Supplier Industry	313
M. Niklas-Höret, ZVEI e. V. (hereby represented on behalf by AUMOVIO), Berlin;	
ZVEI Member companies (automotive)	

7 Architecture – Open Source for SDV

From Cloud to Vehicle: An Open Source Pipeline for AI Model Deployment, Isolation, and Lifecycle Management	333
V. T. Zein, Red Hat, Inc., Winter Garden, USA	
The Autopilot for Functional Safety: Combining Certified Open-Source Middleware with AI-Driven Architecture and Artifact Generation	343
A. Kampmann, D. Püllen, Determion GmbH, Aachen	
More than code: Building Eclipse S-CORE as new standard for SDV and the business of industrializing it	353
B. Reistel, ETAS GmbH, Hildesheim; S. Kappel, ETAS GmbH, Stuttgart	

7 Security

Cybersecurity Opportunities in Open Source-SDV	365
T. Nilges, P. Haile, Carbyte Engineering GmbH, Rülzheim	

7 Disruptive Methods & Tools

Agentic AI-Enabled Development for RISC-V Architectures in the SDV Era Bounded automation, tool qualification and intellectual property in safety-related embedded development	377
G. Vink, TASKING Germany GmbH, Munich	

Risk Based Testing Instead of Test Case Explosion – Making Safety Argumentation Measurable for ADAS and Automated Driving	389
F. Sontheim, dSPACE SE & Co. KG, Paderborn	

Next-Generation Automotive Software Factory – Evolving CI/CD Pipelines for AI-Generated Code using X-as-Code Principles	401
N. Lukic, G. Gromeier, RT-RK, Novi Sad, Serbia	

7 Automated Driving – Simulation

Virtual Homologation with Credible Simulation	415
S. Bilgic Istoc, IPG Automotive GmbH, Frankfurt/Main	

Toward Trustworthy Simulation for AI-Based AD Functions A Regulation-Compliant Assessment Workflow	427
J. Kottig, E. Uslu, T. Brünker, M. Meyer, FEV.io GmbH, Aachen G. Leotta, FEV Italy, Bologna; G. Büyük Ayhan, FEV Türkiye, Istanbul M. Emin Baslak, FEV Türkiye, Ankara	

7 Smart Components

Dynamic Agricultural Environment for Real-Time Physics-Based Sensor Simulation – Real-Time Capable Camera and LiDAR Simulation of Harvesting	443
N. Rüddenklau, T. Leßmann, dSPACE SE & Co. KG, Paderborn	

From Sensor Capability to Real-World Applications LiDAR as an Enabler for Automation and Safety in Mobile Machines	457
O. Ramoli, Seyond Europe GmbH, Eschborn	

7 Automation and Autonomy

Large-scale Offroad Robotics: Autonomy for Heavy Machinery Semantic Environment Understanding as the Key Enabler beyond Curated Test Sites	469
J. Petereit, Fraunhofer IOSB, Karlsruhe	

Autonomy at the Jobsite Turning Technology Into Customer Value	481
M. Schwall, Volvo Construction Equipment Germany GmbH, Konz	

Systematic Collection of Multimodal Images and Creation of a Farm Field World Model for Highly Predictive Farming Operation	493
S. Mukherjee, CNH Industrial, San Diego, California, USA	

7 Software-Defined Machines

- Software-Defined Machine (SDM): Assessing the Transformation Journey of the Mobile Machines Industry**
Detailed analysis of the state of the industry from technology to processes and implications on mobile machines industry 503
M. Herdrich, P. Eisele, P3 Consulting GmbH, Stuttgart
- Software-Defined Autonomy: How Standard Hardware Scales in New Applications** 517
K. Hirsch, M. Rasumak, ITK Engineering GmbH, Lollar
- Mature User Experience after Softwarization: Product Positioning through Design** 525
J. Seifert, F. Koller, UID GmbH, Ludwigsburg

7 Connectivity and Communication

- From Harvest Data to Decisions: Introducing a Framework for Interoperable Task Records in Connected Agricultural Systems** 539
C. Schröer, A. Grever, Maschinenfabrik Bernard KRONE GmbH & Co. KG, Spelle
- High-Speed ISOBUS (HSI) for next-generation precision agriculture**
Ethernet-based ISOBUS for faster data exchange, backward compatibility, and future precision-farming capabilities 551
J. Roesbeke, CNH Industrial N.V., Zedelgem, Belgium
- SOVD for High Speed ISOBUS: Challenges of Dynamic, Multi-Vendor Systems** 565
B. Böhlen, Daten- und Systemtechnik GmbH; Aachen

7 Electrification

- Unlocking the Full Value of Traction Batteries**
Vehicle-to-X for (Low Voltage) Mobile Machinery 577
P. Tielmann, Jungheinrich Norderstedt AG & Co. KG, Norderstedt;
C. Jäger, Industrie Elektronik Brilon, Brilon
- DC Charging Communication and Megawatt Charging System (MCS) for Electrified Mobile Machines**
Standards, Architecture and System Integration 587
S. Nagel, chargebyte GmbH, Leipzig
